

# Comments for SSN Meeting, Jeffrey Love:

## Possible goals for the future

- Organize regular international meetings of SSN observers so that more consistent counting procedures can be developed and over-all standards improved. This might be similar to similar meetings for magnetic-observatory workers.
- Develop a standard SSN time series that includes estimates of uncertainty or variance.
- Issue a statement (or warning) on the reality (or not) or long-term trends.
- Publish explicit and justified recipe for calculating the standard SSN time series, which includes adjustments, from the original (unadjusted) data.
- Publish or present for wide dissemination the original (unadjusted) data.
